

Instruction on the criteria for communicating positives or isolation for COVID-19 at the UPC

The purpose of this instruction is to obtain from the institution the most up-to-date and structured information possible, from people in the community who may have been exposed to the COVID-19 virus, and therefore, allow us to evaluate the impact of the crisis at the UPC. At the same time, establish the most effective concrete measures for the isolation or intensive cleaning of spaces.

We call on all members of the community to communicate with each other isolation methods that you are aware of, because of being in contact with any affected person or persons.

The channel established by these communications is salutupc@aspyprevencion.com

We put it in an express way through the entity that manages our mutual work service.

This channel is managed by healthcare staff and will only inform the UPC of the following data,

in order to guarantee the confidentiality of those affected

- Situation: Contact Infection / Isolation.
- If you are a POI / STEP / Student
- School / Faculty / Department / Institute / Service / Unit / Others
- If you are a student, year and degree.
- Date the medical services notified you of the infection and / or medical quarantine
- Spaces where you developed your activity the week before the notification of infection or isolation

At the same time we ask the directors of the academic units and / or the heads of service, as appropriate, to encourage this unique channel of communication of situations of affected people between the people related to their unit. In the event that you have received a notice in advance, please inform the affected person so that he / she can communicate again using the link above.

IMPORTANT: This is a case communication channel, it is NOT a COVID19 reporting channel. The Coronavirus Health Consultation Channel is, at all times, 061, CATSALUT, and the Ministry of Health.
