

230734 – FUNDAMENTALS OF SEMICONDUCTOR DEVICES

Credits: 5 ECTS

LECTURER

Coordinating lecturer: Isidro Martín García

Others:

PRIOR SKILLS

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:

1. **EFFECTIVE USE OF INFORMATION RESOURCES:** Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
2. **FOREIGN LANGUAGE:** Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

TEACHING METHODOLOGY

- Lectures
- Application classes
- Problem assignments
- Exams with short questions and problems
- Short oral presentations

LEARNING OBJECTIVES OF THE SUBJECT

Learning objectives of the subject:

The aim of this course is to teach students at an introductory level about the physical principles of semiconductor devices and offer them an overview about the reasons why semiconductor devices are the basis of the electronics industry.

In particular, we go in depth in the physical foundations, then we will present in detail diodes and bipolar transistors. Additionally, a brief description and analysis of fundamental properties of basic electron devices will be done.

Learning results of the subject:

- Ability to analyse and predict the general behaviour of semiconductor devices.
- Ability to quantify the electrical properties.
- Ability to obtain the different electrical models to be applied in circuit analysis and design.

STUDY LOAD

Hours large group: 39

Hours small group: 0

Hours self study: 86

CONTENTS

1. Fundamentals

Description:

- Crystal structure
- Atomic model
- Energy bands
- Carrier concentrations
- Currents in semiconductors
- The continuity equation

Full-or-part-time: 60h

Theory classes: 17h 30m

Self study : 42h 30m

2. P/N junctions

Description:

- Band diagram in thermal equilibrium
- Electrostatics
- Steady state I-V characteristics
- Small signal model
- Junction breakdown

Full-or-part-time: 30h

Theory classes: 7h 30m

Self study : 22h 30m

3. Bipolar junction transistor.

Description:

- The transistor effect
- Band diagram
- Common-base I-V characteristics
- Ebers-Moll model
- Small signal model
- Non idealities

Full-or-part-time: 30h

Theory classes: 8h

Self study : 22h

4. Other electron devices

Description:

- Description and analysis of basic optoelectronic devices like photoconductors, photodiodes, solar cells, LED's, lasers, TFT, etc.

Full-or-part-time: 5h
Theory classes: 2h
Self study : 3h

GRADING SYSTEM

Final examination: 45%
Partial examinations and controls: 45%
Oral presentation: 10%
